Introduction to CISM®

The Information Systems Audit and Control Association (ISACA) is an international not-for-profit making professional organization dedicated to controlling and managing the use of information systems. The Certified Information Security Manager (CISM®) is an ISACA credential specifically geared towards experienced information security managers and those who have information security management responsibilities. The American National Standards Institute (ANSI) has accredited the CISM® certification under ISO/IEC 17024:2003.

The CISM® designation is designed to provide executive management with confidence that those earning the designation have the required knowledge and ability to manage information security. The domains of knowledge covered are highly streamlined and aligned with the roles and responsibilities of real-world information security managers. It is business-oriented and focuses on key concepts of information risk management, including management, design, and technical security issues.

While its central focus is security management, all those in the IS profession with security experience will find value in obtaining the CISM® designation. Register for the examination directly from ISACA International's web site at:
